HONG KONG (CHINA)  
LAGRANJA DESIGN + MLA ARCHITECTS

**SEA-GOING VESSEL**

Imminent departure for Hong Kong.

All aboard the good ship Lagranja Design.

There are several elements that stand out in their projects: context, positioning and the environment.

And what better city than Hong Kong for such an audacious project as this. Made from futuristic LED modules stacked on top of each other, the heart of this towering structure is full of wondrous objects such as shells, shellfish, bicycles, rockets and toothbrushes.

Lagranja's quirky interior takes us on a voyage through an imaginary universe full of color, technology and total modernity. The individual units have been left as a blank canvas for each occupant to adapt themselves. However, the car park, the entrance hall, the lifts and the toilets all propel us into space. The polished concrete floors match the shiny steel surfaces, while the mirrored ceilings reflect the turquoise and frosted green tones of every floor. And, since the future goes hand-in-hand with innovation, Gravity is equipped with a pared down direct flush system which uses sea water in order to prevent the waste of both freshwater and precious square meters, both in short supply in such a constrained environment! A good example to us all...

Contactless.  
The TEMPOMATIC WC direct flush valve automatically detects and limits the flow of water. Sophisticated yet discreet, this disk fits so neatly into the wall that you could be in danger of forgetting how hi-tech it is!

**DELABIE products installed:**

- TEMPOMATIC WC electronic direct flush valve (Ref. 463030)
- BINOPTIC electronic basin tap (Ref. 378015)
- BINOPTIC wall-mounted electronic basin tap (Ref. 379ENC)
